**The Stolen Future: Uncovering the Hidden Cost of Toxic Chemicals** is a groundbreaking work that exposes the devastating impact of toxic chemicals on our health, environment, and economy. Published in 1996, the book was written by Theo Colborn, Dianne Dumanoski, and John Peterson Myers, and it has since become a landmark in the field of environmental health.

The Stolen Future documents the widespread contamination of our environment with toxic chemicals, and it shows how these chemicals are linked to a wide range of health problems, including cancer, reproductive disorders, learning disabilities, and asthma. The book also exposes the chemical industry's role in suppressing research on the dangers of toxic chemicals, and it calls for a fundamental change in the way we produce and use chemicals.
